The graph displays the percentage of relative coefficient of variation (%rCV) over time. The x-axis is labeled with months: Apr, Jul, Oct, and Jan. The y-axis is labeled %rCV and ranges from 0 to 120. Two data series are plotted: a purple line with open circles and a red line with filled squares. The purple line remains consistently low, mostly below 10% rCV. The red line shows a sharp peak of approximately 115% rCV in early April and another smaller peak of about 15% rCV in mid-July. Vertical dashed red lines are positioned at approximately April 10, July 10, August 10, and September 10.

The graph displays the percentage of replicates with a coefficient of variation greater than 10% (%rCV) over time. The x-axis represents months from March to January. The y-axis represents %rCV from 0 to 120. Two data series are plotted: a purple line with open circles and a red line with filled squares. The purple series remains consistently low, mostly below 10%. The red series shows a sharp peak of approximately 115% in early April and several smaller peaks in July, with values around 10-15%. Vertical dashed red lines are positioned at approximately July 1st, August 1st, November 1st, and December 1st.

The graph displays the percentage of relative coefficient of variation (%rCV) over time. The y-axis is labeled '%rCV' and ranges from 0 to 120. The x-axis shows months from April to January. A purple line with circular markers represents the data, showing a very high peak in March (around 120%) and then remaining near 0% for the rest of the period. Red square markers highlight specific data points in July, August, and November. Vertical dashed red lines are drawn at July, August, and November.
